

HUBMICRO

MDF panel with round acoustic perforations and a micro-perforated finish

MDFpanel witharondacoustic perforation and a micro-perforated finish

Finitions *Finishes*	Natural wood veneer, HPL laminate. wood veneer, HPL laminate
Avantages *A dvantage s*	Preserves the aesthetic appeal of the finish thanks to virtually invisible micro-perforations
Applications *Applications*	Wall cladding, suspended ceilings Wall cladding, suspended ceilings

MDF PANEL WITH ACOUSTIC PERFORATIONS

HubMicro is a sound-absorbing panel made of perforated MDF with a decorative surface micro-perforated with a diameter of 0.5 mm.

The micro-perforation, which is virtually invisible to the human eye, allows you to fully appreciate the aesthetic appeal of the chosen finish, especially on fine wood species and wood-grain laminates.

Our HubMicro perforated acoustic panels can be fully fire-retardant upon request. We have a test report certifying that the fire-retardant particleboard or MDF + panel assembly veneer + B-S2-d0 certificate available panel + fine-grained wood veneer + varnish
