PRODUCT DESCRIPTION

SCULPTED WAVE PANELS

- The wave-sculpted composite panel is available in various designs and shapes for vertical applications.
- Each panel is unique in terms of appearance.
- The support panel is a 19 mm MDF panel, without fire protection requirements. 100% PEFC. (Classification B1/A2 possible)
- The upper side is covered with a mineral coating with a thickness of about 3 to 6 mm.
- The back of the panel is white according to the factory's choice and is not a visible surface (technical
- surface).
  The edges of the panel are raw.

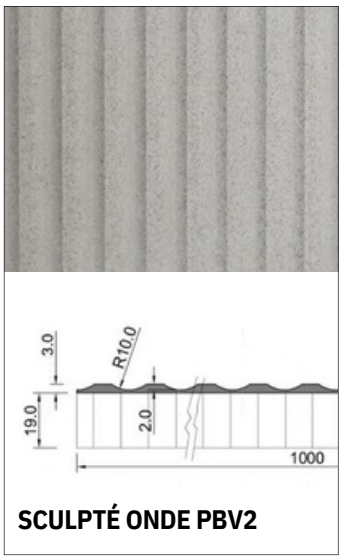

Dimensions of the panels: 2,750 x 1,000 mm. Special formats available on request.

- The characteristics of wave sculpting are similar to the typical appearance of a concrete surface.
- The touch and appearance are very similar to those of a concrete surface.
- This is due to porosity as well as slight cracks.
- The mineral coating is classified as non-flammable A2-s1, d0 according to DIN EN13501-1.
- (B1/A2 classification possible)
- The wave sculptures can be easily machined with all conventional carbide-tipped joinery tools.
- The surfaces are protected by a matt lacquer.
- For higher loads, an additional matte protective lacquer is recommended.
- The panels have some tension due to the mineral coating on one side (4 mm allowed over 2000 mm).

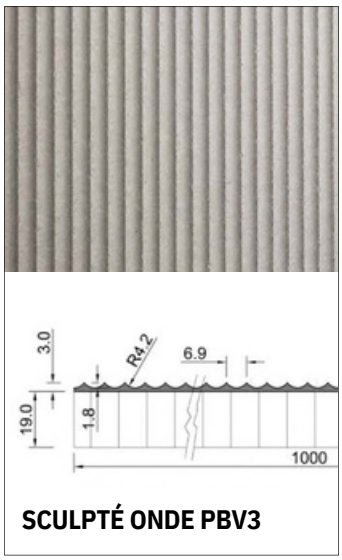

USE

The surface is exposed to normal aging processes.
By example, interior fittings, decorative vertical surfaces, wall coverings, etc.

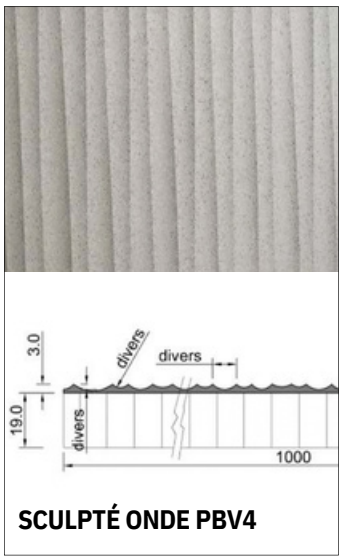

POSSIBLE VARIATIONS

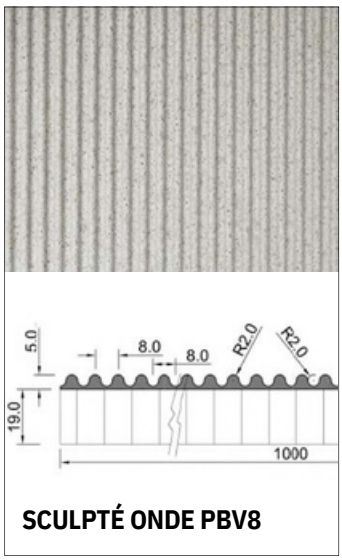

SCULPTÉ ONDE PBV2

SCULPTÉ ONDE PBV3

SCULPTÉ ONDE PBV4

SCULPTÉ ONDE PBV8

Mineral coating is an individual product that is characterized only by its composition, which is always exactly the same.
Chemical/physical processes cannot be modified or manipulated.
Therefore, each individual sculpted wave production will have a slightly different appearance and internal structure of the coating is not predictable. These differences are explicitly desired and constitute the wave-carved trademark. They do not constitute grounds for complaint.
